Piuma Lift

by **miiba**[®] s.d.

what is an electric bidet?

Electric Bidet is a new type of Toilet Seat that attaches to your existing toilet bowl. It replaces your existing toilet seat and **wash your posterior with a warm and pure stream**, instead of the traditional tissue paper work, **without moving to the bidet**. It is quite eco-friendly to the environment; it is a new trend of the future life.

Compared with traditional toilet seat, the electric BiBidet has the advantages in health, preventing you from bacterial infection. Especially for women, elderly people and all people affected from disabilities.

Why BIBIDET by Piuma Lift?

- › Because the electric bidet "BiBidet" is easy to install
- › Because it is easy to use with thoughtful functions and features, which all meant to grant better hygiene for you and your family as well as to improve your lifestyle
- › Because the electric bidet BiBidet uses anti-bacterial material
- › Because it is safe
- › Because it is manufactured according to energy saving perspectives

Functions:

- Posterior Wash
- Feminine Wash
- Pulsating Massage
- Washing Moving
- Heated Seat
- Warm Air Dry
- Deodorizer
- Smart Energy Save
- Wireless Remote Control
(only on request; only for some models)

Features:

- personal washing settings
- Pure Stream
- Dual Nozzle
- Nozzle Self-Cleaning
- Slow Closing Seat
- Smart Sensor
- Anti-Bacterial Material

FUNCTIONS

Posterior Wash

Refreshing rear wash with water stream for the ultimate cleaning, say goodbye to those tissue paper days. By simply pushing button operation and adjustable water temperature/pressure, the soft water stream washes your posterior thoroughly and comfortably. Besides, it can help to ease the discomfort of hemorrhoids and reduce bleeding.

Feminine Wash

A delicate and dedicated stream of water, produced by a separated nozzle group, washes the sensitive female area safely and comfortably. It is especially useful for pregnant women and during.

Pulsating Massage

The Pulsating Massage gives you a water stream for a naturally relaxing effect

Enjoy a spa-like experience with the push of button while washing. This function is also useful to help to strengthen muscles and heal hemorrhoids thanks to regular changes of water pressure.

Washing Moving

"Washing Moving" function moves the nozzle back and forth thus reaching a wider area of cleaning.

Heated Seat

Warm and comforting toilet seat (for those chilly mornings...). Seat temperature can be set with 3 levels to achieve maximum comfort. When not needed it can also be turned off.

Warm Air Dry

Pamper yourself even further with the built-in air dryer. We suggest you use toilet paper to wipe away excess water. Then use the air dryer to achieve optimum dryness and comfort.

Deodorizer

Carbon deodorizer automatically traps and filters the smelly odor before it leaves the toilet bowl. It brings you the fresh air when you are doing your business.

Smart Energy Save

When you leave home for a long time, you can use Energy Saving to lower your energy consumption. With push button operation, the onboard computer lowers and maintains the appropriate water temperature during "non business" hours according to different seasons: 25°C in Summer, 15°C in Spring or Fall, and 5°C in winter.

FEATURES

1. Getto acqua

Special nozzle produces a focused water stream that helps the bowels to move completely and effortlessly. The Pure Stream effectively softens and loosens stool to ease constipation, relieving strained bowel movements. No more straining bowel movement!

2. Dual Nozzle

There is a dual nozzle system with separate nozzles for feminine and posterior wash. Having 2 separate nozzles increases the life endurance of the device, but above all, it prevents bacterial infection, thus further protecting women.

3. Nozzle Self-Cleaning

Before every use, the nozzle gets a spray wash. The self-cleaning can withdraw the few cold water left in the nozzle tube by last use, which make sure that you wash with warm water in the very beginning.

4. Slow Closing Seat

Thanks to hydraulic damping device the cover closes gently, without producing noises.

5. Smart Sensor

BiBdet will only operate when the seat is occupied by skin touch to avoid accidental use.

6. Anti-Bacterial Material

Because of moist and closed environment, bacteria reproduce very fast in the bathroom. To avoid this, high-end ABS material with functions of antibacterial, anti-static, anti-fire material is used.

BiBidet

Safety

A) Ultrasonic welded motherboard, waterproof circuit board with glue injection

B) Multiple security protection to avoid electric leakage

Nano anti-bacterial technology

Adopting special coating technology which put nano liquid polymer on nozzles, water tank and water filter to effectively prevent bacteria

Boosting Device

The water outlet is equipped with a booster pump. Washing water pressure is adjusted according to the individual users' needs by adjusting the pressure of the booster unit. This could avoid the phenomenon of unclean washing caused by the insufficient water pressure of the residential area.

Comby

TOILET SEAT LIFT + BIBIDET

The electronic BiBidet perfectly matches with any type of toilet seat lift SOLLEVA.
